CryptoPulse

A crypto exchange website

I did a UI/UX for an easy-to-use crypto site where users can trade, earn, and explore an NFT marketplace. The goal was to create a platform that is both intuitive for newbies and powerful for pros, with a trustworthy design.

UI Design

Low Fidelity Prototype
High Fidelity Prototype

4

Challenges

Beginners

Some Newbies get overwhelmed by crypto sites packed with cluttered layouts, making it hard to understand trading or NFTs on the home page.

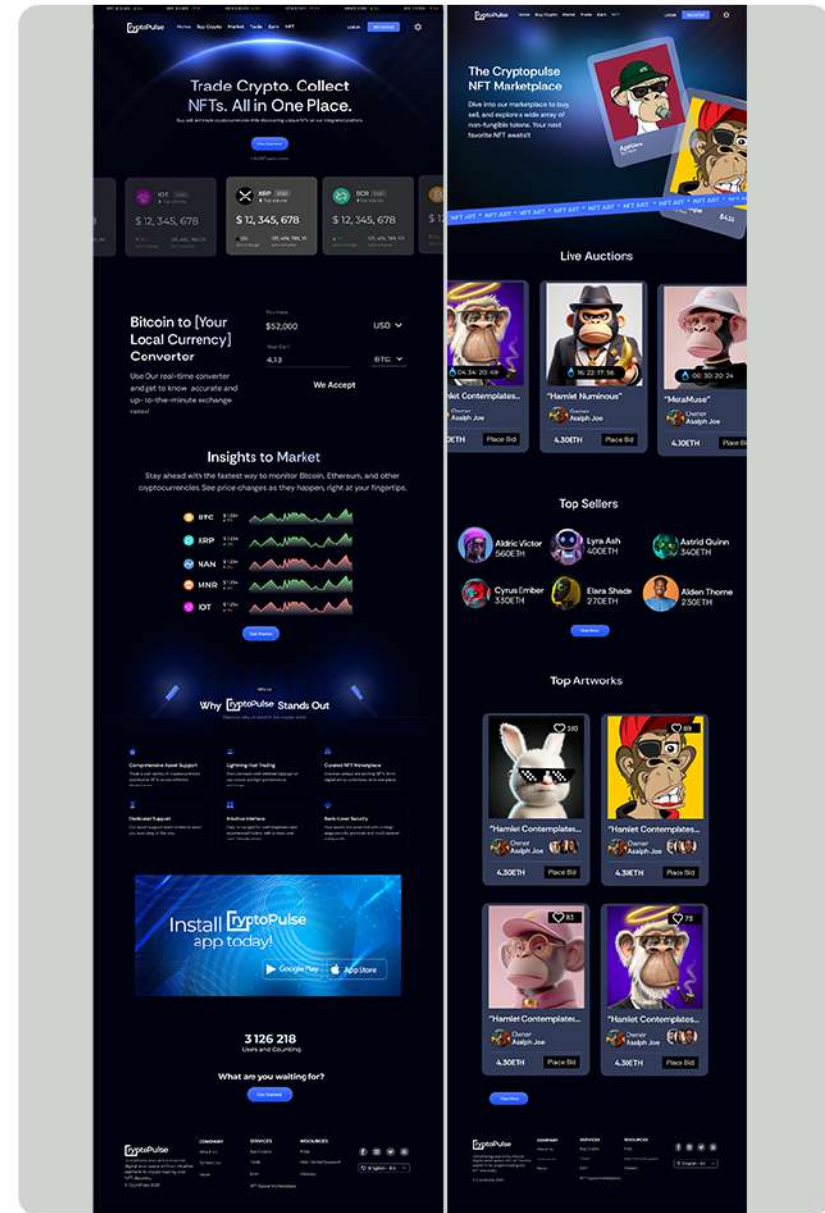

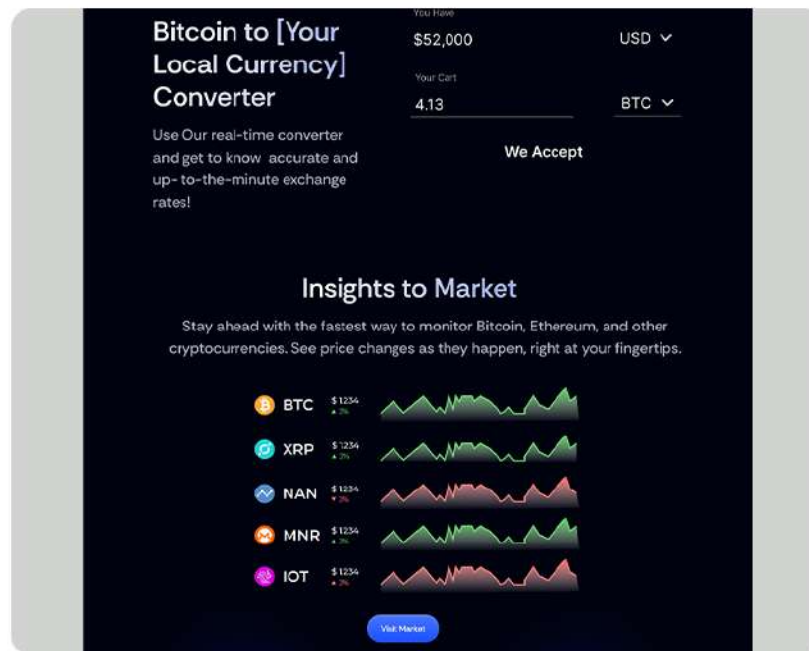

Pros

Pros on the the other hand need quick real access to advanced features like market data or fast transactions which can get buried in simplified designs.

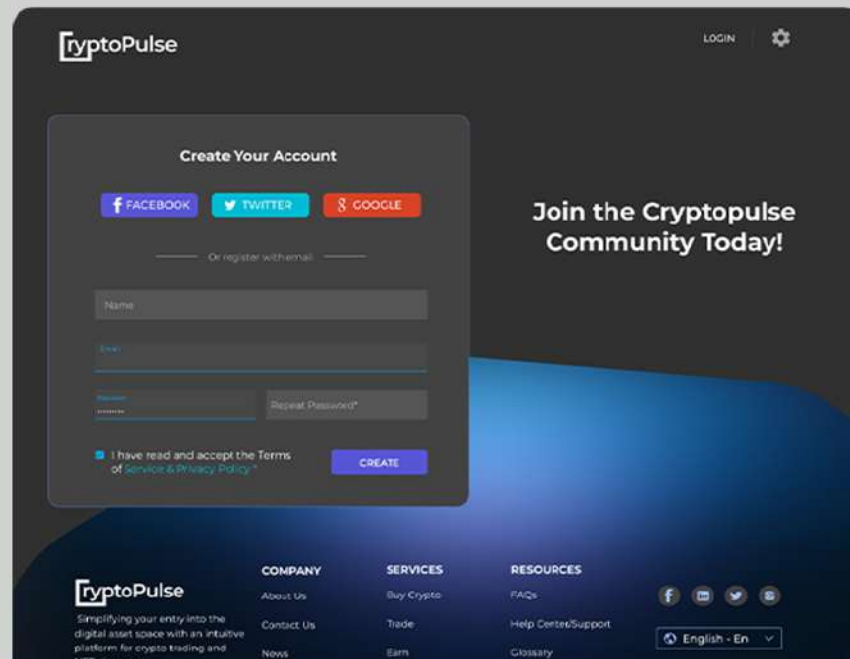

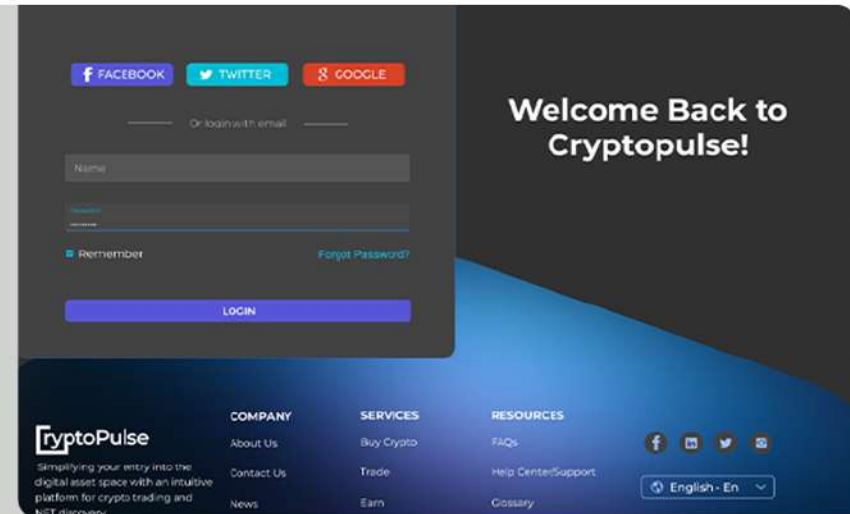

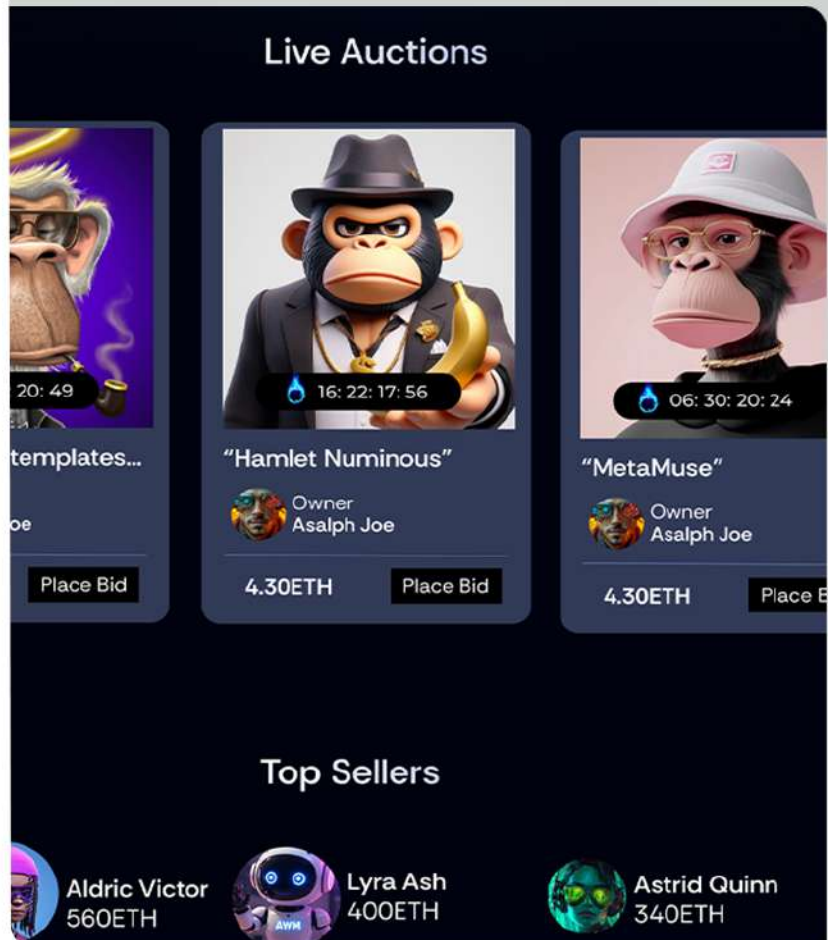

Plan of Action

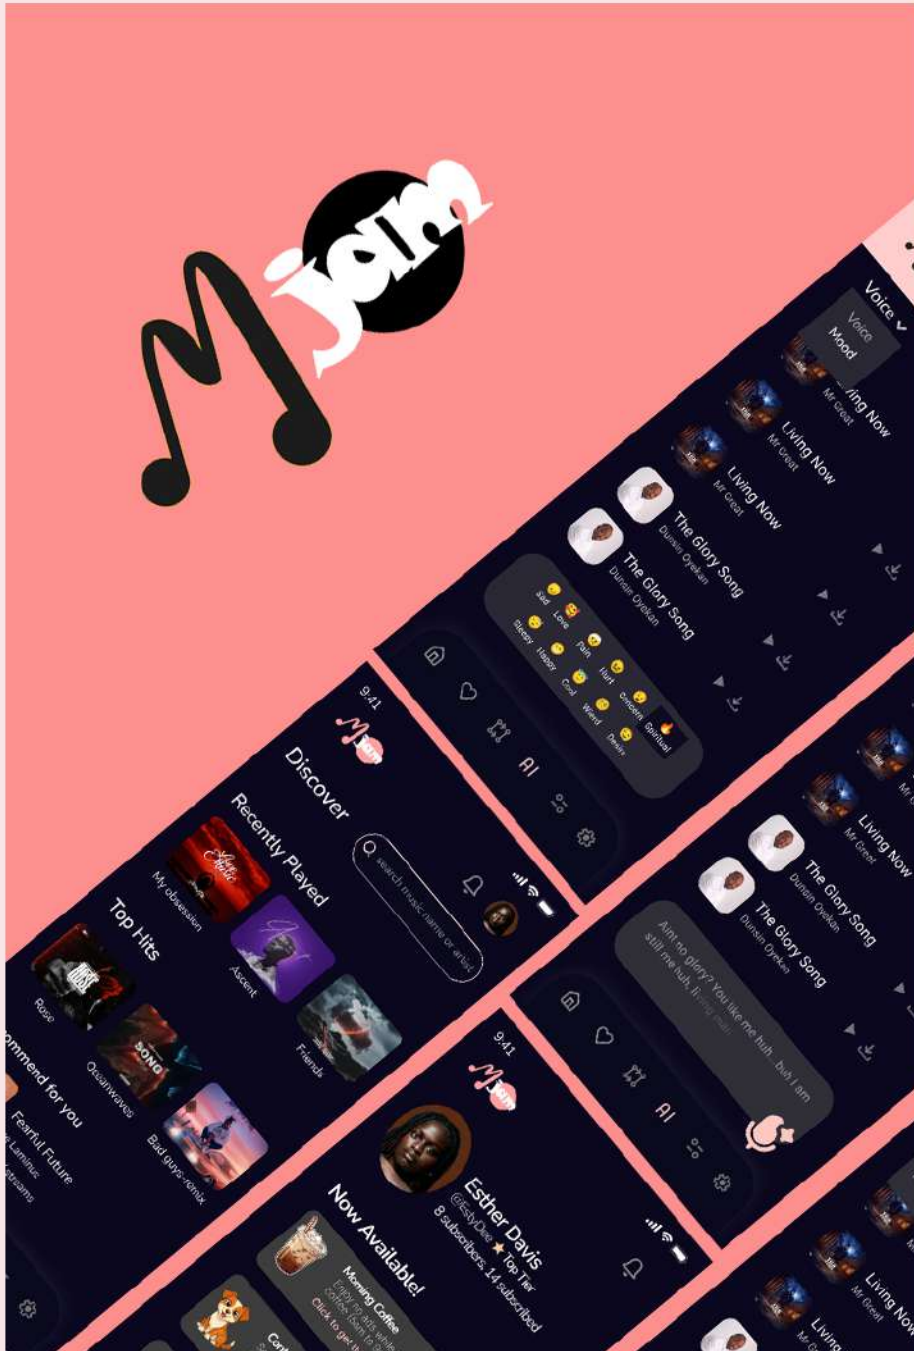

To tackle the challenge, I simplified the homepage and NFT page to cut out jargon and clutter for newbies, added quick access buttons for pros to jump to market data and trades, designed clear and secure login and register pages with trust building visuals like lock icons.

Plan of Action

Secure Login and register pages and NFT live auction section in the NFT page with bold timers and clear bid buttons.

Challenges

Problem 1

People often know what a song sounds or feels like, but struggle to recall the exact title or artist. How can they find music when all they have is a hum, a tune, a snippet of lyrics, or just a mood?

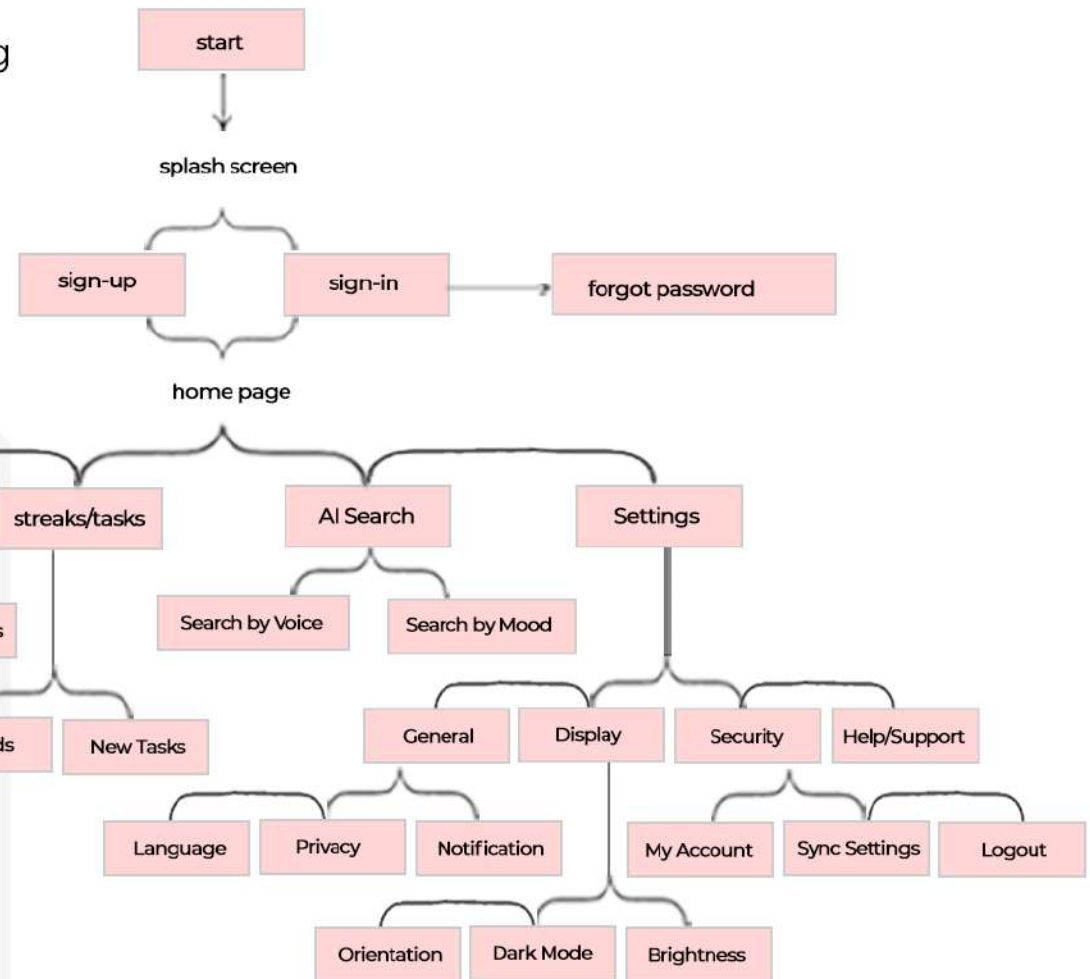

Problem 2

Many music apps keep cool features, like high-quality streaming or offline listening, locked behind a paid subscription. It's a real bummer when you can't get the full experience without paying extra, but imagine if just keeping up your daily streaks could unlock these perks for you.

Plan of Action

The whole user flow should be designed keeping in mind the user personas. The home page UI needs to be refreshed to show only necessary information without overcrowding. The bottom navigation also needs to change to make the experience more easy to understand and navigate.

ACTION	Get the app	AI-Search Song	Build a Playlist	Earn Rewards
TASK LIST	1. Download app from app store 2. Set up account with email or social login	1. Open AI search 2. Choose voice or mood options 3. If voice, hum the tune. If mood select the mood 4. See lists of songs	1. Play selected songs 2. Add songs to a new or existing playlist	1. Maintain daily listening streak 2. Complete streak challenges 3. Claim awards 4. Watch out for new tasks to do
FEELING ADJECTIVE	Excited about diving into a fresh music app with killer AI vibes.	Overwhelmed by tons of song matches and tricky AI results.	Engaged by curating a fire playlist that slaps	Motivated to keep the streak poppin' for epic rewards.
IMPROVEMENT OPPORTUNITIES	Offer dynamic theme customization to match	Have a place to show history of AI searches to	Be able to sync playlists to keep them updated	Integrate podcasts to reward streak tasks with

Oma Grace

Age: 19
Occupation: student

"I want to be able to get my hands on a song even if it's just the tune of a part of the song I know"

Oma is a college student who loves music to focus and relax while studying. She's always looking for new songs to add to her playlist

Goals

- Identify song titles and artists when I only remember a snippet of the lyrics
- Identify song titles and artists when I only know a bit of how the song sounds

Frustration

- Difficulty getting to locate exact songs I hear and want to listen to
- Limited options for music discovery on other platforms

DJ MAX

Age: 28
Occupation: DJ

"I want to be able to get music beats of different genres more easily"

Maxwell is a DJ/Sound Maker who creates music for events and productions. He's always on the lookout for new and inspiring sounds.

Goals

- Find unique and rare tracks to use in his production
- Discover music with specific sounds, instruments, or effects (e.g vinyl crackle, distorted guitars)

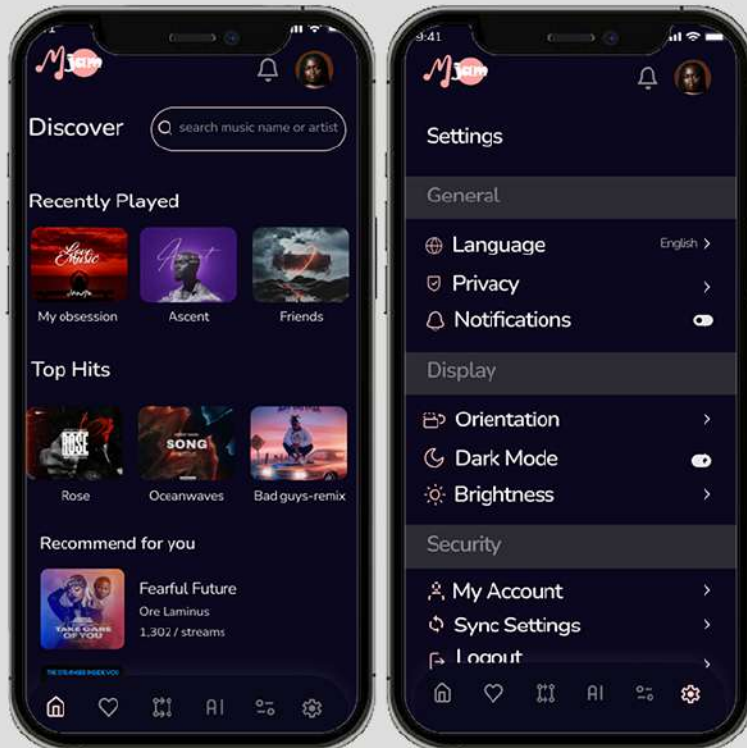

Frustration

- The app's search functionality not being robust enough to find specific sounds or tracks
- Tracks which are available for commercial use are not indicated which may lead to copyright issues.

Clean Navigation

- The home screen features a clear search bar, allowing music to be found quickly and efficiently.
- The **Recommended, Discover, and Top Hits** are organized cleanly on the home page. This makes it easy to explore music without feeling overwhelmed by too many elements.
- Getting around is easier with the **bottom navigation**. One can quickly switch between the **Home page** to play music and **Settings** to adjust your app preferences

AI Music Search

- Find music using mood or voice search.
- For voice search, your spoken words become text. A "More" button then appears, letting you choose genres to refine your results.
- If you search by mood, the "More" button also lets you select a genre to perfectly match the music to your feeling.
- Finally, a list of songs appears, ready for you to choose and enjoy.

Earn Reward Pages

- When you go to the streak menu from the bottom nav, you are automatically redirected to be in the streak homepage. **BUT** if the previous day's task is completed, automatically, you'll be in the progress view page where a **green prompt** will greet you, notifying you to **complete the new day's task**.
- A **calendar view** will show your progress, highlighting your current streak and the number of days remaining or the streak task to be completed.

Streak Home Page

- After tapping the complete task button, it **redirects you to your list of tasks to be completed** (Here, being a list of songs to listen to for 120minutes, of which you can search your own songs to listen to).
- The green menu shows as long as there is an available /ongoing streak. Else, it doesn't show. The green color, despite not being part of the brand colors, was chosen for contrast. To better **"drag" the user's attention..**

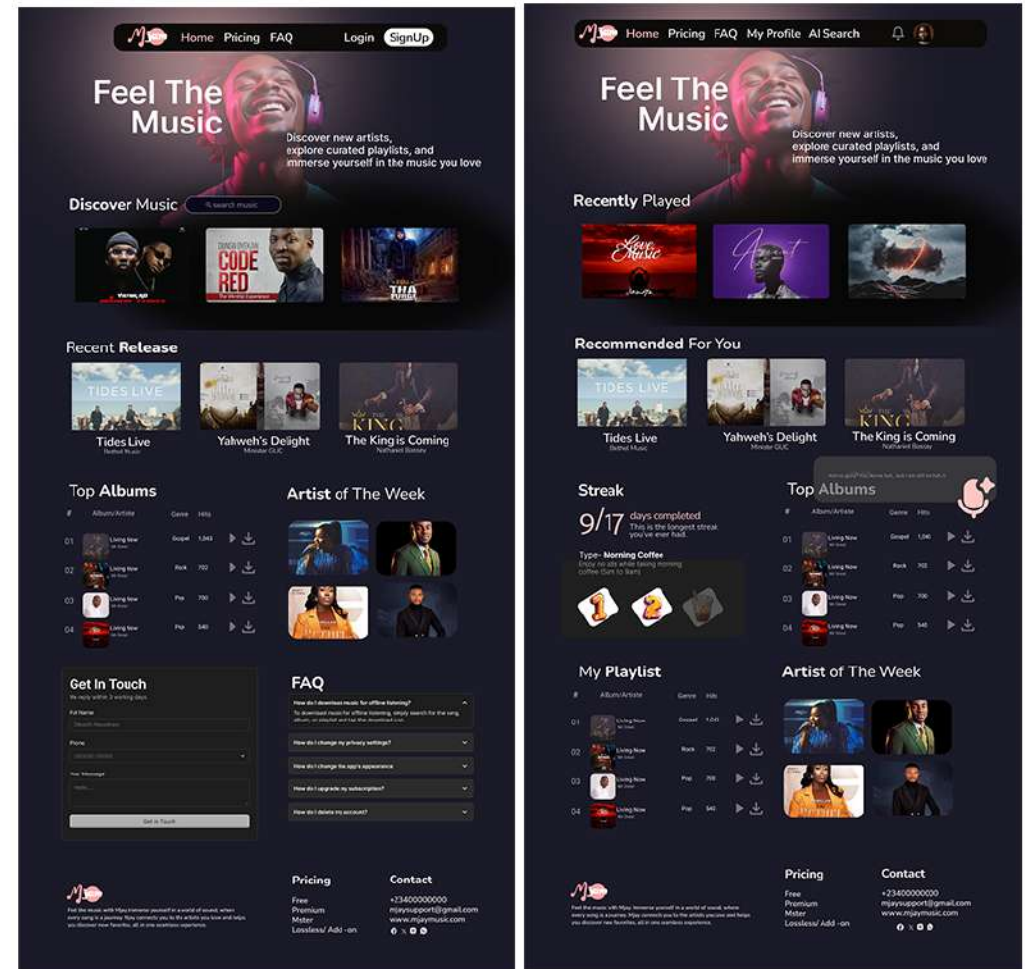

Reward & New Menu Options

- You'll see a notification of the number of awards on the **award menu icon** in the streak page, When it is tapped, voila! award is claimed!. Then the white arrow button is tapped, and if there's more than one award, more awards show, else after the arrow is clicked, the list of awards claimed should be displayed.
- The **new menu icon** when tapped displays a new set of tasks options that the user can try out.

Keke Booking Platform site

Developed a user-friendly mobile app to connect users with on-demand keke rides or personal drivers from the comfort of their homes.

It enables ride booking as well as driver onboarding to improve accessibility and convenience.

Challenges

Problem1 (Drivers)

Drivers struggle to find consistent employment opportunities in the keke ride sector. How better could they show their availability, and secure gigs?

Problem2 (Clients)

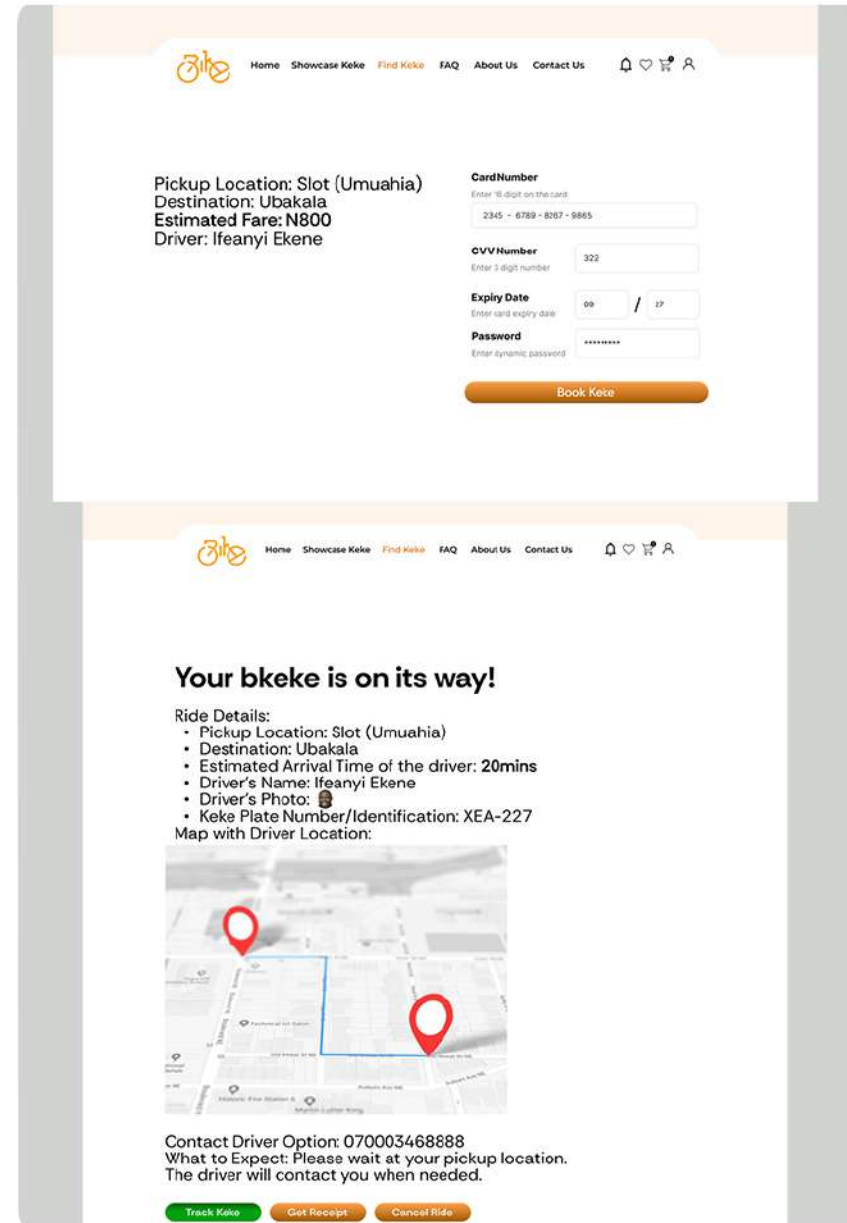

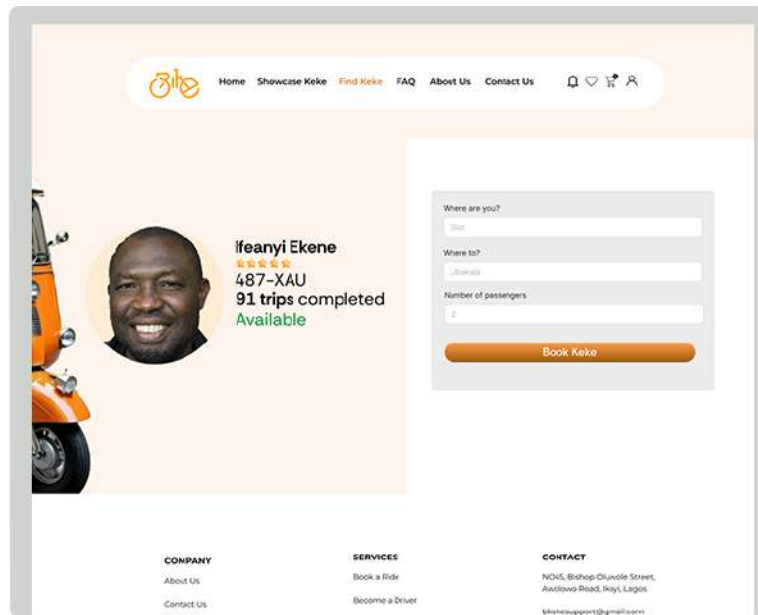

Clients struggle to book kekes for weighbills due to unreliable tracking and lost delivery records, or for personal travel because of chaotic road rowdiness and scarce keke availability, especially for quick errands.

Plan of Action

When you're **ready to book**, the app will clearly show your ride price upfront.

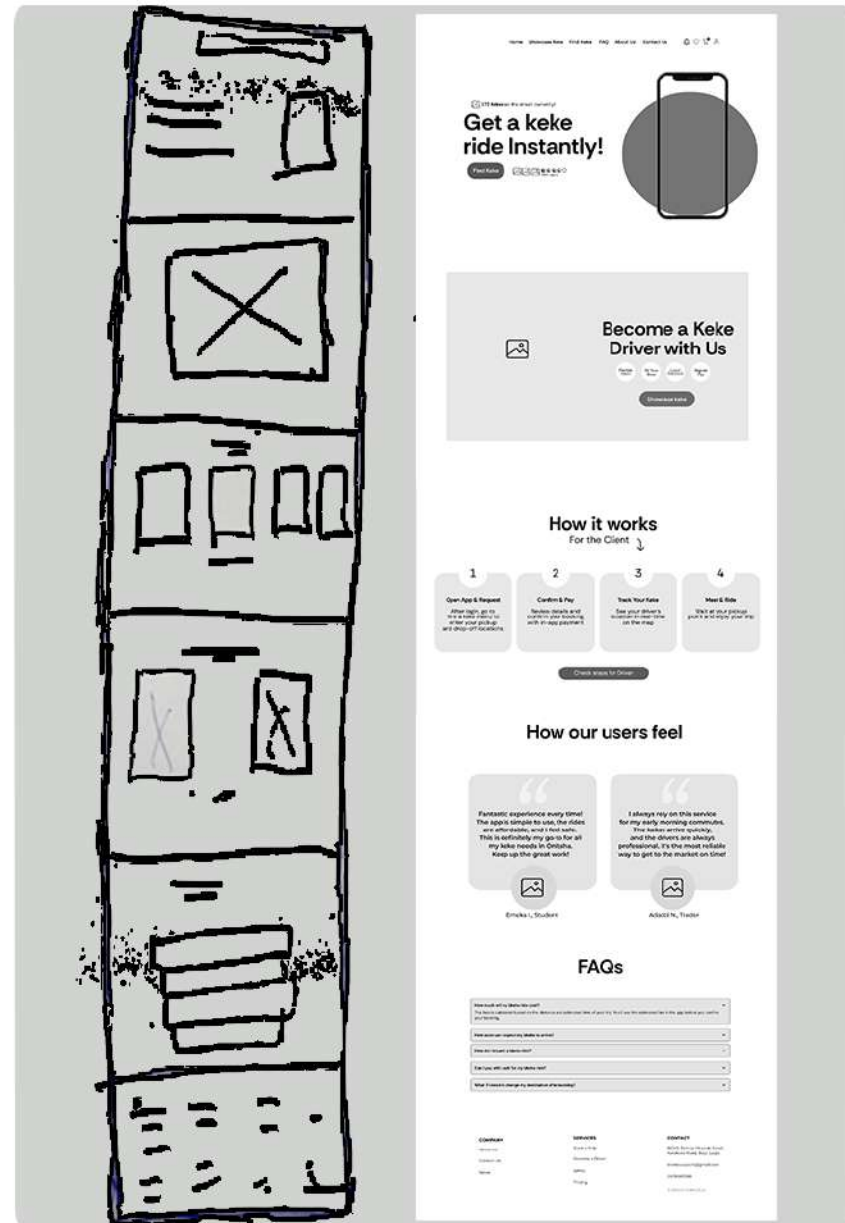

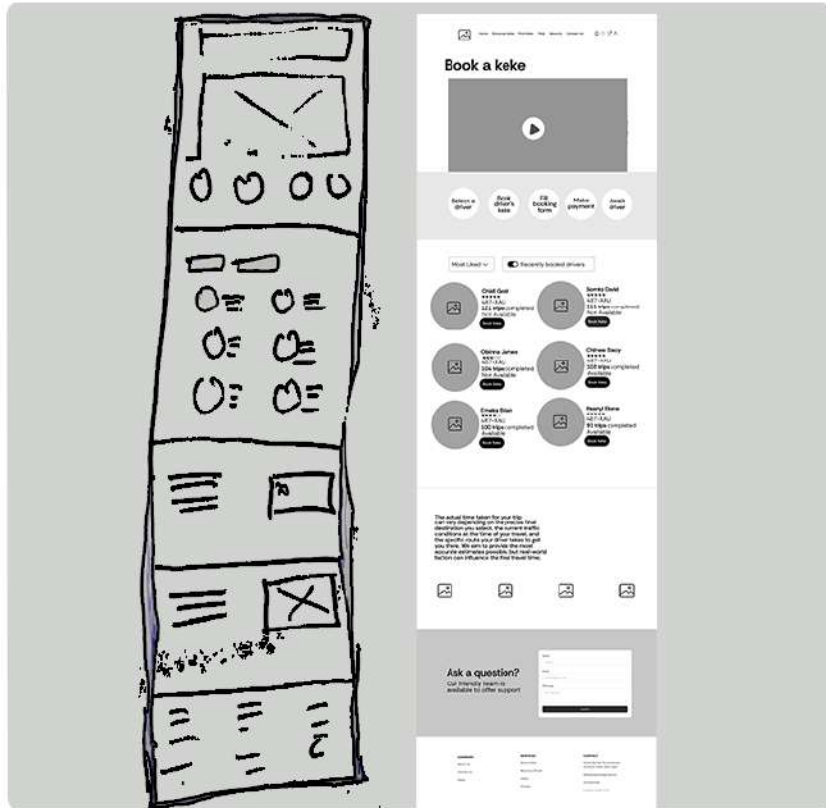

Where you can input your card details simply and securely.

Then after payment, you'll land on a page that lets you **track your keke live**. This screen keeps it simple, showing you exactly where your driver is and their estimated arrival time without any extra clutter.

bKeke App Design

- The app flow focuses on users, with a clean home screen and simple navigation.
- Riders can easily find kekes.
- Drivers get smooth onboarding to secure gigs.
- We'll build it using **low, mid, and high-fidelity designs**.

How our users feel

“

Fantastic experience every time! The app is simple to use, the rides are affordable, and I feel safe. This is definitely my go-to for all my keke needs in Onitsha. Keep up the great work!

Emeka I., Student

“

I always rely on this service for my early morning commutes. The kekes arrive quickly, and the drivers are always professional. It's the most reliable way to get to the market on time!

Adaobi N., Trader

FAQs

How much will my bkeke ride cost?

The fare is calculated based on the distance and estimated time of your trip. You'll see the estimated fare in the app before you confirm your booking.

How soon can I expect my bkeke to arrive?

How do I request a bkeke ride?

Can I pay with cash for my bkeke ride?

What if I need to change my destination after booking?
